Research Interests	Primary: Behavioral Economics, Economics of Digitization Secondary: Industrial Organization, Competition Policy
Education	Ph.D. in Economics December 2017 – 2023 (<i>expected</i>) University of Bremen Supervisor: Lars Hornuf M.Sc. in Economics October 2014 – November 2017 University of Trier <i>Semester abroad at the Universidade Católica Portuguesa, Porto</i> B.Sc. in Social Sciences October 2009 – September 2014 University of Trier
Research Visits	Maastricht University March 2023 (<i>scheduled</i>) Department of Microeconomics and Public Economics Host: Peter Werner Max Planck Institute for Innovation and Competition March 2018 Host: Dietmar Harhoff
Job Market Paper	“Lock-in effects in online labor markets” with Fabrizio Ciotti and Lars Hornuf , CESifo Working Paper 9379 (2021). Pre-registration: AEARCTR-0006136 . Abstract: Online platforms that implement reputation mechanisms usually prevent the transfer of ratings to other platforms, leading to lock-in effects and high switching costs for users. This situation can be capitalized by platforms, for example, by charging higher fees to their users. In this paper, we theoretically and experimentally investigate the effects of platform pricing on workers’ switching behavior in online labor markets and analyze whether a policy regime with reputation portability could mitigate lock-in effects and reduce the likelihood of worker capitalization by the platform. We further examine switching motives more thoroughly and differentiate between monetary motives and fairness preferences. Theoretically, we show the existence of switching costs faced by workers if reputation mechanisms are platform-specific. The model predicts that reputation portability lowers switching costs, eliminating the possibility for platforms to capitalize lock-in effects. We test our predictions using an online lab-in-the-field experiment. The results are in line with our model and suggest that the absence of reputation portability leads to worker lock-in, which can be capitalized by platforms. Moreover, reputation portability has a positive impact on the wages of highly rated workers. The data further show that the switching of workers is primarily driven by monetary motives, but perceiving the fee as unfair also plays a significant role. Finally, we find that workers lower their effort levels after a fee is introduced.
